CORE STACK

Mobile

- Flutter
- Android Development
- Firebase
- Push Notifications
- Play Store Deployment

Web

- PHP / Laravel
- HTML5 / CSS3 / JS
- Bootstrap
- Responsive Design

Backend

- REST APIs
- JWT Auth
- Authorization
- Payment Gateways
- Business Logic

Database

- MySQL
- Database Design
- Query Optimization

DEVOPS & SERVER

- Linux Server Mgmt
- VPS Configuration
- Apache / Nginx
- SSH / SSL/TLS
- UFW Firewall
- Fail2Ban
- DNS / Domains
- CI/CD Basics
- Backup & Recovery

TOOLS

- Git / GitHub

MUHAMMAD ILYAS

Full Stack Mobile & Web Developer | Flutter | Laravel | Backend Engineer | DevOps & Server Administrator

PROFESSIONAL SUMMARY

Full Stack Mobile & Web Developer with 5+ years of experience designing and delivering complete software solutions — from Flutter mobile applications and responsive web platforms to Laravel-powered backends, REST APIs, relational databases, and production server infrastructure. Specializes in building production-ready, scalable, secure, and high-performance applications end to end, owning everything from architecture and UI implementation to deployment, server hardening, and long-term maintenance. Known for strong problem-solving and debugging ability under real production constraints, and for using AI-assisted (Vibe Coding) workflows to accelerate delivery without compromising clean, maintainable, well-structured code.

PROFESSIONAL EXPERIENCE

Full Stack Mobile & Web Developer | 5+ Years Experience

- Developed complete, production-ready mobile applications end-to-end using Flutter, from UI implementation to release.
- Built scalable backend systems and business logic using Laravel to power mobile and web platforms.
- Designed and implemented secure REST APIs with JWT-based authentication and role-based authorization.
- Created feature-rich admin panels for content, user, and business management.
- Developed responsive, cross-browser websites using HTML5, CSS3, JavaScript, and Bootstrap.
- Designed, managed, and optimized MySQL databases, including query performance tuning and data integrity.
- Integrated third-party APIs and payment gateways into production applications.
- Deployed and configured applications on Linux (VPS) servers using Apache/Nginx, SSH, and SSL/TLS.
- Implemented server security best practices, including UFW firewall rules, Fail2Ban, and access hardening.
- Managed source control and team workflows through Git and GitHub deployment pipelines.
- Maintained live production applications, monitoring performance and resolving issues proactively.
- Diagnosed and resolved complex, cross-stack technical issues spanning mobile, backend, and server layers.

FEATURED PROJECTS

PayQuick — Mobile Payments & Business Platform

[Flutter](#) [Laravel](#) [Admin Panel](#) [REST APIs](#) [Play Store](#)

End-to-end digital payments platform built with a Flutter mobile application, a Laravel-powered backend, a dedicated admin panel, and a companion website. Engineered secure REST APIs and JWT-based authentication to protect financial transactions, alongside robust database management for accounts and transaction history. Owned the full production deployment pipeline and published the application on the Google Play Store, where it is live and actively used.

FCN — Cross-Platform Application & Dashboard

[Flutter](#) [Laravel](#) [Admin Dashboard](#) [API Development](#) [Play Store](#)

Full-stack application combining a Flutter front end with a Laravel backend and a

- Android Studio
- VS Code
- Visual Studio
- Postman
- phpMyAdmin
- Firebase Console

LANGUAGES

English — Professional Working Proficiency
Urdu — Native

comprehensive admin dashboard for operational oversight, alongside a supporting website. Led API development to connect mobile and web clients to backend services, handled server deployment and configuration, and carried out performance optimization to ensure a fast, stable experience at scale. Published and available on the Google Play Store.

GAME DEVELOPMENT

Additional experience in Unity game development, covering gameplay programming, in-game UI implementation, bug fixing, performance optimization, and publishing support — bringing the same problem-solving discipline used in production software to interactive and game projects.

CORE COMPETENCIES

Full Stack Development	Flutter	Laravel
Backend Engineering	API Development	Server Administration
DevOps	Cloud Deployment	GitHub
Database Management	Security	Performance Optimization
Problem Solving	Team Collaboration	

ACHIEVEMENTS

- ★ Successfully delivered multiple production-ready mobile and web applications for real clients.
- ★ Published mobile applications (PayQuick, FCN) on the Google Play Store.
- ★ Built complete software ecosystems spanning mobile apps, websites, admin panels, APIs, and servers.
- ★ Experience owning full deployment pipelines, from code commit to live production server.
- ★ Recognized for strong troubleshooting and debugging expertise across the full technology stack.
